Valley Windows NEW Stellar Timber Lift & Slide Door

Valley Windows, a recognised leader in the manufacturing of energy efficient windows and doors, is excited to announce the launch of the new Stellar Timber Lift & Slide Door, believed to be the largest, smoothest and most effortless sliding door available on the Australian market.

Complementing Valley Windows' existing range of timber and aluminum windows and doors, the Stellar Timber Lift & Slide Door incorporates the latest European heavy duty carriage system and hardware for smooth, effortless operation. Whereas some sliding doors can require up to 180 newtons of force to operate, the Stellar Timber Lift & Slide Door needs only 25 newtons of pressure to slide. In the locked position the sliding door drops down onto the sill providing superior water, draught, dust and noise control.

Available in sizes up to 2700mm high x 4800mm wide, the two panel sliding door makes it possible to have entire walls of natural light and unobstructed views. Its expansive openings make it ideal for seamless integration of indoor and outdoor entertaining areas; the Stellar Timber Lift & Slide Door offers a strikingly balanced visual appeal. Its Western Red Cedar frame gives the Stellar Timber Lift & Slide Door an attractive finish that is ideal for both traditional and contemporary house designs.

Designed to hold both single and double glazed units, the Stellar Timber Lift & Slide Door can accommodate insulating glass units (IGUs) up to a maximum thickness of 26mm with a maximum air space of 14mm. Combined with its superior weather seals and timber frame; this makes it the perfect energy efficient door solution.

The Stellar Timber Lift & Slide Door features a multi point locking system for added security, and frames are screwed together, rather than nailed, in keeping with all of our timber product range to ensure long term stability. The door system has been independently tested and accredited to AS 2047-1999 Windows in Buildings – Selection & Installation.

Established nearly three decades ago, Valley Windows fabricate and sell a premium, custom-built range of windows and doors in Western Red Cedar, Victorian Ash Hardwood and the Next Generation G3 Aluminium (Thermally Improved Suite).

Valley Window products have appeared in many Housing Industry Association and Master Builders Association award winning homes. These include awards for Australian Home of the Year and Best Sustainable Energy Home. Servicing metropolitan and regional Victoria, Valley Windows is committed to continuing to lead the way with energy efficient window and door solutions.
