

LIFT AND SLIDE FROM VALLEY WINDOWS

Valley Windows are proud to announce the release of their new generation "Lift and Slide" Western Red Cedar Sliding door unit, fitted with impressive and innovative features.

The new sliding door from Valley Windows is more than a standard sliding timber door; it's a tried and tested door unit that allows greater openings to your outdoor entertainment with minimum effort to slide.

"We are proud to launch this new sliding door to the Architectural and Designer markets," says Mike Joseph, Sales Manager from Valley Windows. "Not only does it boast modern features, but it's also environmentally-friendly."

Made-up from sustainable Western Red Cedar, Lift and Slide is a functional application with all the modcons for ease of operation, performance and aesthetics. The Lift and Slide requires an amazingly low 26 Newtons of force to slide the panel across compared to the industry allowable operating force of 180 Newtons. Added to that, the innovative running design of the door panel incorporating heavy duty European Rollers result in amazingly smooth and quiet usability.

As for product specifications, the Lift and Slide is bigger and better. Its maximum door unit size is 2700mm high x 4800mm wide (N3 rating only) and comes in a two panel configuration consisting of a sliding and a fixed door panel. A sample door 2400 high x 3600 wide has been tested to AS2047-1999 by a NATA accredited test laboratory achieving an N4 (1500psi) rating.

"Lift and Slide" Western Red Cedar Sliding door unit during testing.

The sliding door rails are built with solid state 92mm x 68mm timber sections, while the matching fixed door panel ensures glass lines are equal and symmetrical," adds Mike. The Sill is made of 165mm X 45mm Merbau and further enhanced with water/ air tight compression seals all around the door frame rebates. The sliding panel encompass a multi-point lock system for added security and the innovative door handle hardware, unique in its own way is available in stainless steel silver or white.

All Glazing applications from single to double glazing (inclusive of up to a 14mm air gap) can be accommodated with a maximum door panel weight of 150 kg.

Valley Windows manufacture and sell a premium, custom built range of windows and doors in Western Red Cedar, Victorian Ash Hardwood and Designer Aluminium Series. Recognised as industry leaders in providing Energy Efficient Solutions using quality products and high performance glazing, Valley Windows was inducted into the Gippsland Business Awards Hall of Fame in 2005.

Among its accolades, Valley Window products have been used by many leading Designers, Architects and builders who have gone on to be winners at Major Building Industry Awards.

So it's good to know that Lift and Slide is not only in good company, but setting new standards in timber sliding doors.

Valley windows is a member of the B.D.A.V and is also associated with the M.B.A.V, H.I.A, A.W.A, and, A.G.G.A.
